LABOR MARKET INFORMATION FOR AFFIRMATIVE ACTION PROGRAMS IN MONTANA

Area Coverage

This report includes population and labor force information for the State of Montana from the 1970 Census and from the 1977 and 1976 Current Population Survey (CPS) annual average estimates prepared by the U. S. Bureau of Labor Statistics. The Billings Standard Metropolitan Statistical Area, defined as all of Yellowstone County, and the Great Falls Standard Metropolitan Statistical Area, defined as all of Cascade County are presented using information from the 1970 Census and current Annual Labor Force Reports prepared by the Research and Analysis Section of the Employment Security Division.

The 1970 Census data on labor force and population are included for the rest of Montana's fifty-six counties for those employers who recruit workers in a localized area. An occupational employment profile from the 1970 Census by race and sex is also provided by county.

Statistical Data and Their Significance

The tables which follow are designed to provide labor market information to assist employers in evaluating the utilization of women and minorities in their work force and in establishing goals to improve such utilization. The data in this publication meet or exceed the minimum requirements of the Office of Federal Contract Compliance Revised Order No. 4, Subpart B, Paragraph 60 - 2.11: Section (a), (1), (i) - (v) and (2), (i) - (v).

Tables I through VIII contain statewide 1977 annual average information on the civilian labor force, employment and unemployment. Various occupations and industries are listed, with male and female categories, age

groups, and white and non-white divisions included. Three of the tables show full-time or part-time employment status, industry of the last job held, and duration of unemployment.

Table IX is based on 1976 annual average estimates and includes some of the same type of material as in the 1977 estimates.

The Caveat Section includes Table X, Standard Errors of Estimated Numbers, which should be used in conjunction with the sections on 1977 and 1976 CPS estimates, Table I through Table IX.

The Historical Series (Tables XI, XII, and XIII) for Montana Statewide, Billings, and Great Falls SMSA contain labor force information which is available on a monthly basis from the Research and Analysis Section of the Montana Employment Security Division.

Table XIV shows the composition of Montana's population at the time of the 1970 Census. In Montana, the enumeration of persons of Spanish heritage was based on data from the 15% sample on mother tongue and therefore nearly all racial groups are included. Persons of Spanish heritage were classified mostly as white unless self-identification of the respondent denoted some other race. The category "other" includes Korean, Aleut, Eskimo, Malayan, Polynesian, etc.

Tables XV, XVI, and XVII contain civilian labor force, employment and unemployment information and show the relative composition of these categories by county, sex, and minorities at the time of the 1970 Census.

Table XVIII shows the 1970 Census percent distribution of employed persons 16 years and over by occupation, total and female, by race and ethnic groups for the state of Montana, fifty-six counties, and the part of Yellowstone Park which lies in Montana.

Services to Employers

The Montana Job Service is prepared to assist employers in non-discriminatory recruitment, and also has current labor market information and can advise employers on available publicly sponsored job training programs including government financed on-the-job training. There are 24 local Job Service offices in the principle cities of Montana. You are invited to call on any of these offices for assistance in your organization, additional labor market information, and for other services connected with your employment problems.

CAVEAT SECTION

CAVEAT SECTION

The information in this publication for 1976 and 1977 was based on a sample rather than a complete count. Consequently, the estimates may differ from the figure that would have been obtained if it were possible to take a complete census using the same schedules and procedures. In general, the error of a sample estimate varies inversely with the size of the sample and the size of the estimate. Hence, an estimate for a subgroup constituting a small proportion of the population will have a relatively higher error than an estimate for a subgroup constituting a large proportion of the population within that area.

Standard error tables make it possible to compute the relative error (standard error divided by estimate size) of a sample estimate, and to compare two sample estimates using a standard statistical test of significance. The standard errors in this section can be used directly to develop 68 percent confidence intervals for sample estimates. Standard errors for 90 - percent confidence intervals can be computed by multiplying the standard errors in this section by 1.65; for 95 - percent confidence intervals, 1.96 should be used.

The interpolated standard error for an estimate of 22,000 total unemployed for Montana is:

$$z = [[(c-b)/(a-b)] \times (x-y)] + y$$

where a = published size immediately above the size desired (25,000)

b = published size immediately below the size desired (10,000)

c = size desired (22,000)

x = standard error of a (2,000)

y = standard error of b (1,000)

z = standard error of c (1,800)

FOOTNOTES

- 1/ These data were produced from the second and fourth counts of the 1970 Census of Population.
- 2/ The 1970 Census of Population enumerated Spanish-American as mostly white but also some Negro and other races.
- 3/ Includes all other racial groups not elsewhere classified, such as Hawaiian, Korean, Aleut, Eskimo, Malayan, Polynesian, etc.
- 4/ Includes those persons living within the Montana boundaries of Yellowstone National Park.
